# 1 General Information

## 1.1 Purpose

The purpose of this document is to outline the testing, validation, and verification process of the functional and non-functional requirements, for the ScrumBot project. These test cases were conceived before the implementation and therefore will be used by the project members for future reference during the development process.

## 1.2 Scope

This test plan will provide a method to fully test ScrumBot by performing tests both at a modular level using unit tests created through Pytest, as well as at higher level, through using exploratory testing and specification-based testing. The unit tests cases will also cover partition testing, fuzz testing, and boundary testing.

## 1.3 Acronyms, Abbreviations, and Symbols

Table 2: Table of Abbreviations

Abbreviation	Definition
CD	Continuous Delivery/Deployment
CI	Continuous Integration
EDT	Eastern Daylight Time (UTC-4)
EST	Eastern Standard Time (UTC-5)
FR	Functional Requirement
HTTP	HyperText Transfer Protocol
MVC	Model View Controller
NFR	Non-functional Requirement
POC	Proof of Concept
SRS	Software Requirements Specification
UTC	Coordinated Universal Time

Table 3: Table of Definitions

Term	Definition
Acceptance Testing	A method of testing which is conducted to determine if the requirements of the specification are met
Boundary Testing	A method of testing where values are chosen on semantically significant boundaries
Code Inspection	A method of static testing where developers walk through the code
Discord	A chat application. The platform in which ScrumBot will be implemented.
Dynamic Testing	A method of testing where code is executed
Exploratory Testing	A method of testing where the tester simultaneously learns the code while testing it. It approaches testing from a user's viewpoint
Fuzz Testing	A method of testing where random inputs are given to attempt to violate assertions
Integration Testing	A method of testing where individual software modules are combined and tested as a group
Kanban Board	A method of scheduling tasks through categorizing tasks to improve efficiency
Partition Testing	A method of testing where the input domain is partitioned and input values are selected from the partitions
Pylint	A Python linter, used for static testing
Pytest	A unit testing framework for Python
ScrumBot	The Discord bot in development
Specification-based Testing	A method of testing where test cases are built based on the requirements specification
Static Testing	A method of testing where code is not executed
System Testing	A method of testing where the tests are performed on the system as a whole
Trello	A web based Kanban project management system
Unit Testing	A method of testing focused on testing individual methods and functions

## 1.4 Overview of Document

This document outlines a test plan that fully encompasses all requirements of ScrumBot, as stated in the SRS. This document includes relevant information concerning: test team, automated testing, testing tools, testing schedule, unit-testing, and test cases.

## 2 Plan

### 2.1 Software Description

Scrum is an Agile process framework widely used in industry for managing and coordinating collaborative projects. Scrum being a process based on the agile development method, follows a highly iterative process and often has heavy customer involvement, therefore it can be often be complex. With Discord being a popular communication tool used by many teams of software developers today, ScrumBot provides a solution that directly integrates the management of a scrum development cycle into the communication channels. ScrumBot will allow for better management and organization of retrospectives, stand-ups, and other scrum/agile stages used by software teams within their routine communication channel.

### 2.2 Test Team

The test team will consist of all the members of the project: Arkin Modi, Leon So, and Timothy Choy.

### 2.3 Automated Testing Approach

Testing shall be automated with the use of the GitLab's CI/CD tool and the Pytest framework. The tests will be run every time a commit is pushed to the repository.

### 2.4 Testing Tools

The unit tests will be written using the Pytest framework. Static testing will be done with the use of Pylint.

### 2.5 Testing Schedule

See Gantt Chart at the following URL, <https://gitlab.cas.mcmaster.ca/modia1/ScrumBot/-/blob/master/ProjectSchedule/>.

## 3 System Test Description

### 3.1 Tests for Functional Requirements

#### 3.1.1 Installation

##### 1. BE1-1

Type: Specification-based, Dynamic, Manual

Initial State: A Discord channel is active

Input: ScrumBot is added into the channel

Output: Various notifications, such as a link to documentation and basic commands

How test will be performed: ScrumBot will be manually added to a Discord channel

### **3.1.2 Project Creation**

#### **1. BE2-1**

Type: Specification-based, Dynamic, Manual, Static etc.

Initial State:

Input:

Output:

How test will be performed:

### **3.1.3 Project Removal**

#### **1. BE3-1**

Type: Specification-based, Dynamic, Manual, Static etc.

Initial State:

Input:

Output:

How test will be performed:

### **3.1.4 Sprint-planning Meeting**

#### **1. BE4-1**

Type: Specification-based, Dynamic, Manual, Static etc.

Initial State:

Input:

Output:

How test will be performed:

### **3.1.5 Stand-up Meeting**

#### **1. BE5-1**

Type: Specification-based, Dynamic, Manual, Static etc.

Initial State:

Input:

Output:

How test will be performed:

### **3.1.6 Retrospective Meeting**

#### **1. BE6-1**

Type: Specification-based, Dynamic, Manual, Static etc.

Initial State:

Input:

Output:

How test will be performed:

### **3.1.7 Grooming Meeting**

#### **1. BE7-1**

Type: Specification-based, Dynamic, Manual, Static etc.

Initial State:

Input:

Output:

How test will be performed:

### **3.1.8 Add a Meeting**

#### **1. BE8-1**

Type: Dynamic, Unit

Initial State: ScrumBot active in Discord channel

Input: Pytest file is run

Output: Pytest output

How test will be performed: The test will be performed through Pytest, where tests will run the command to add meetings, focusing on the parameters entered to create meetings

#### **2. BE8-2**

Type: Specification-based, Dynamic, Boundary, Manual

Initial State: ScrumBot active in Discord channel

Input: Cancel meeting command is entered, with a specified meeting

Output: The specified meeting will be removed, otherwise an error message is raised

How test will be performed: The test will be performed manually through commands entered in Discord. Manual testing primarily will focus on if notifications are sent to the proper people (development team members, business analysts and scrum masters), as well as the interactions between ScrumBot and the tester

### **3.1.9 Cancel a Meeting**

#### **1. BE9-1**

Type: Dynamic, Boundary, Unit

Initial State: ScrumBot active in Discord channel

Input: Pytest file is run

Output: Pytest output

How test will be performed: The test will be performed through Pytest, where tests will run the command to cancel meetings, in situations where the meeting exists and

where the meeting does not exist

**2. BE9-2**

Type: Specification-based, Dynamic, Manual

Initial State: ScrumBot active in Discord channel

Input: Cancel meeting command is entered, with a specified meeting

Output: The specified meeting will be removed, otherwise an error message is raised

How test will be performed: The test will be performed manually through commands entered in Discord. Manual testing primarily will focus on if notifications are sent to the proper people (development team members, business analysts and scrum masters)

**3.1.10 List Scheduled Meetings**

**1. BE10-1**

Type: Specification-based, Dynamic, Boundary, Unit

Initial State: ScrumBot active in Discord channel

Input: Pytest file is run

Output: Pytest output

How test will be performed: The test will be performed through Pytest, where tests will run the command to list meetings, in situations where there are meetings scheduled and when there are no meetings

**2. BE10-2**

Type: Specification-based, Dynamic, Boundary, Manual

Initial State: ScrumBot active in Discord channel

Input: The list scheduled meetings command is entered into Discord

Output: ScrumBot should list out the list of scheduled meetings

How test will be performed: The test will be performed manually through commands entered in Discord. Test cases be similar to the unit tests above

**3.1.11 See Tasks**

**1. BE11-1**

Type: Specification-based, Dynamic, Manual

Initial State: ScrumBot active in Discord channel

Input: The see tasks command is entered into Discord

Output: A link to the Trello Kanban board, if integrated

How test will be performed: The test will be performed manually through commands entered in Discord.

## 3.2 Tests for Non-Functional Requirements

### 3.2.1 Usability and Humanity Requirements

#### Learning Requirements

##### 1. NFRT-UH4

Type: Dynamic, Manual

Initial State: ScrumBot active in Discord channel

Input: Help command entered

Output: ScrumBot should output help menu

How test will be performed: The user will enter help menu into Discord chat with ScrumBot active

### 3.2.2 Performance Requirements

#### Response Speed

##### 1. NFRT-P1

Type: Dynamic, Manual

Initial State: No commands being made

Input: Command entered

Output: Response should be received within 2 seconds of the input being sent

How test will be performed: The user will enter a command into the Discord channel with ScrumBot active. ScrumBot should provide a response within 2ms of the command being entered

#### Meeting Schedule Accuracy

##### 1. NFRT-P2

Type: Dynamic, Manual

Initial State: No meetings schedules

Input: Schedule meeting command with meeting details

Output: The meeting is added to the meeting list with the correct location

How test will be performed: The user will enter the command to schedule a meeting and the meeting details into the Discord channel with ScrumBot active

##### 2. NFRT-P3

Type: Dynamic, Manual

Initial State: No meetings schedules

Input: Schedule meeting command with meeting details

Output: The meeting is added to the meeting list with the correct time

How test will be performed: The user will enter the command to schedule a meeting and the meeting details into the Discord channel with ScrumBot active

### 3.2.3 Operational and Environmental Requirements

#### Expected Environment

##### 1. NFRT-OE1

Type: Dynamic, Manual

Initial State: New Discord channel without ScrumBot

Input/Condition: Add ScrumBot to the Discord channel

Output/Result: ScrumBot should be fully functional in the Discord channel once added

How test will be performed: The test team will follow the provided installation documentation and add ScrumBot to a brand new Discord channel

#### Requirements for Interfacing with Adjacent Systems

##### 1. NFRT-OE2

Type: Dynamic, Manual

Initial State: ScrumBot added to Discord channel not yet connected to users' Google services

Input/Condition: User wants to connect their Google services to ScrumBot

Output/Result: ScrumBot should be connect to the User's Google account through Google API services

How test will be performed: The test team will attempt to connect their Google services to ScrumBot

##### 2. NFRT-OE3

Type: Dynamic, Manual

Initial State: ScrumBot not yet registered as a public bot

Input/Condition: ScrumBot register with Discord API services and deployed publically

Output/Result: ScrumBot should be a public bot registered with Discord

How test will be performed: The test team will follow documentation provided by Discord to add ScrumBot as a public bot

##### 3. NFRT-OE4

Type: Dynamic, Manual

Initial State: ScrumBot added to Discord channel not yet connected to users' Trello services

Input/Condition: User wants to connect their Trello services to ScrumBot

Output/Result: ScrumBot should be connect to the User's Trello account through Trello API services

How test will be performed: The test team will attempt to connect their Trello services to ScrumBot

#### Installability Requirements

##### 1. NFRT-OE5

Type: Dynamic, Manual

Initial State: ScrumBot not yet added to Discord channel

Input/Condition: User without expertise in Discord bots wants to install ScrumBot

Output/Result: ScrumBot added to Discord channel

How test will be performed: An inexperienced user will attempt to add ScrumBot to a Discord channel by following the provided documentation

**2. NFRT-OE6**

Type: Dynamic, Manual

Initial State: ScrumBot not yet added to Discord channel

Input/Condition: Start installation of ScrumBot

Output/Result: ScrumBot takes less than 5 minutes to install

How test will be performed: Test team will install ScrumBot and time the installation

**3. NFRT-OE7**

Type: Dynamic, Manual

Initial State: ScrumBot installed

Input/Condition: Start uninstalling ScrumBot

Output/Result: ScrumBot is uninstalled

How test will be performed: The test team will attempt to uninstall ScrumBot

### **3.2.4 Maintainability and Support Requirements**

#### **Maintainability Requirements**

**1. NFRT-MS1**

Type: Static, Manual, Code Inspection

Initial State: N/A

Input/Condition: N/A

Output/Result: The code is well documented with comments

How test will be performed: The test team will inspect the code and check if the code is adequately documented using comments

**2. NFRT-MS2**

Type: Static, Manual

Initial State: No Doxygen documents generated yet

Input/Condition: Generate Doxygen HTML and pdf

Output/Result: The Doxygen documentation is successfully compiled and generated

How test will be performed: The test team will try to generate Doxygen HTML and pdf

#### **Supportability Requirements**

**1. NFRT-MS4**

Type: Dynamic, Manual

Initial State: ScrumBot is active on the Discord channel

Input/Condition: User wants to open help menu

Output/Result: Help menu is displayed in the Discord chat

How test will be performed: The test team will attempt to open the help menu in the Discord chat

### 3.2.5 Security Requirements

#### HTTP Connections

##### 1. NFRT-S1

Type: Static, Manual, Code Inspection

Initial State: N/A

Input/Condition: N/A

Output/Result: All connections between the system and the APIs use HTTPS requests

How test will be performed: The test team will inspect the code and check if all connections between the system and APIs use HTTP requests

### 3.3 Traceability Between Test Cases and Requirements

Table 4: Traceability Matrix: Functional Requirement

	FRT-??	FRT-??
REQ?	X	
REQ?		X

Table 5: Traceability Matrix: Non-Functional Requirement

	NFRT-P1	NFRT-S1
P1	X	
S1		X

## 4 Tests for Proof of Concept

### 4.1 Issues and Conflicts

The proof of concept demonstration for ScrumBot consisted on a simple Python discord bot performing basic front end tasks such as creating, listing, and deleting meeting times. There was no database connected to the proof of concept, so memory was not stored from instance to instance.

Issues that were found with the proof of concept were:

1. The lack of a priority list for features
2. The lack of a defined software architectural style
3. The need for time zones, as people could be connecting to meetings from around the world

## 4.2 Resolution

To resolve these issues, we have taken the list of business events from our SRS and have assigned priority to the events. In the case where ScrumBot will not be able to fulfill all the requirements in the given timeframe, ScrumBot will still be able to function as the prioritized functionalities will be implemented.

In regards to the chosen architectural style, we have decided on using MVC as our primary architectural style. This best suits ScrumBot as the view module will be all the input and output from Discord, our controller module will be the commands run, and our model module will be the databases containing all the meeting information.

To tackle the issue regarding time zones, we plan on writing our times in EST or EDT, based on the date scheduled for the meeting. The choice is simply because of our current location, and makes it simpler for us to test and create meetings. However, a new feature we plan on implementing is the ability to convert between time zones given a meeting.

## 5 Comparison to Existing Implementation

N/A

## 6 Unit Testing Plan

Unit testing will be performed through the use of the Pytest testing framework.

### 6.1 Unit testing of internal functions

Unit testing of internal functions will be performed for every function to ensure robustness. These tests will consist of a combination of partition testing and fuzz testing. Through this, verifying that the functions react in a predictable way. Following this, the functions will then undergo integration testing, to verify the compliance of the system with the SRS. During integration testing, stubs and drivers will be created as needed. For the testing of internal functions, the team will aim for a coverage of at minimum 85%.

### 6.2 Unit testing of output files

The only output file will be the application executable, which shall be tested for correctness as a whole as well as the fulfillment of the SRS. This testing will take the form of system testing and acceptance testing. The system testing will test the performance, the behavior under extreme/varying load, and scalability with the number of users. The acceptance testing will ensure the SRS has been fulfilled.
