List of Tables

List of Figures

Table 1: Revision History

Date	Developer(s)	Change
January 23, 2020	Arkin Modi	Copy template
February 3, 2020	Leon So	Worked on Stakeholders section
February 4, 2020	Leon So	Worked on Purpose, Non-functional Requirements sections
February 8, 2020	Leon So	Formatted and added non-functional requirements; Created terminology table; worked on Project Scope; Relevant Facts and Assumptions
February 8, 2020	Arkin Modi	Worked on Mandated Constraints, Off-the-Shelf Solutions
February 8, 2020	Timothy Choy	Worked on Look and Feel Requirements, Legal Requirements
February 8, 2020	Timothy Choy	Updated SRS formatting
February 8, 2020	Leon So	Add Functional Requirements, Update Stakeholders

This document describes the requirements for Scrumbot. The template for the Software Requirements Specification (SRS) is a subset of the Volere template (?). If you make further modifications to the template, you should explicitly state what modifications were made.

1 Project Drivers

1.1 The Purpose of the Project

Scrum is an agile process framework widely used in industry for managing and coordinating collaborative projects. Scrum being a process based on the agile development method, follows a highly iterative process and often has heavy customer involvement, therefore it can be often be complex. It is often difficult to manage communication and coordination within the project due to the complexity of agile development processes. With Discord being a popular communication tool used by many teams of software developers today, Scrumbot provides a solution that directly integrates the management of a scrum development cycle into the communication channels. Scrumbot will allow for better management and organization of retrospectives, stand-ups, and other scrum/agile processes used by software teams during routine communication.

As a result, Scrumbot, a well-integrated scrum management system, can reduce inefficiencies surrounding the management of projects using the scrum framework, as well as strengthen communication within the agile process. This will help software development firms reduce costs and achieve better workflow.

1.2 The Stakeholders

This solution will be used in an environment where the development team uses the scrum agile framework and uses Discord as their routine communication channel.

1.2.1 The Client

- Dr. Ashgar Bokhari (3XA3)

The client for this project is Dr. Ashgar Bokhari - professor of the 3XA3 course.

1.2.2 The Customer

The customer of the ScrumBot is any firm looking to improve efficiency in communication and organization during the Scrum process of an agile software development cycle using the Scrum framework. This customer will likely be a software development firm (or the development department of a firm).

- Software Development Firm

The development firm will benefit through centralizing project resources, therefore improving the organization and management of the project. The development firm will therefore be able to reduce any costs associated with inefficiencies during the development process. This will also improve communication between members of the development firm.

1.2.3 The Users (Roles in Scrum process)

- Product Owner(s)

The product owner(s) will benefit from the reduced development time through improved communication and efficient management of the project. The product owner(s) will also benefit as their ideas and requirements will be better organized, thus helping the development team more efficiently achieve the goals of the product owner(s).

- Scrum Master

The scrum master will be better able to coordinate scrum plans and division of tasks, as well as routine communication (i.e. retrospectives and stand-ups). With a scrum management system directly implemented into the communication channels, the scrum master will be able to directly manage the meeting information and their scrum development cycle during communication.

- Development Team

The development team will be able to more easily follow through on tasks assigned by the scrum master. The development team may easily refer to any relevant articles or information regarding their project. This will reduce inefficiencies and speedup communication within the development team. It will also reduce confusion, as all information concerning the development cycle will be available through their routine communication channel (Discord).

- **Business Analyst**

The Business Analyst will be able to better coordinate communication concerning the project between the development team and the product owner(s). ScrumBot will also allow the Business Analyst to better: organize and monitor the progress of the project, update requirements, and analyse sprint progress.

1.2.4 Other stakeholders

1.3 Mandated Constraints

1.3.1 Solution Constraints

Description: The project shall be written in Python 3.

Rationale: All developers are familiar with Python 3 and there is an existing API available in Python 3.

Fit Criterion: The software is written in Python 3.

Description: The application shall function within Discord.

Rationale: Discord is a popular communication tool used by many software development team. In addition, the existing project utilizes Discord to perform all of its features.

Fit Criterion: All application features are fully operational within Discord.

1.3.2 Implementation Environment of the Current System

The application will be installed on the user's local machine or a server, and added to a Discord server. To function, the application be started on the machine and the user will interact with it through the respective Discord server.

1.3.3 Partner or Collaborative Applications

The application will use Discord and the Discord API to function as an interface.

1.3.4 Off-the-Shelf Software

The following off-the-shelf software will be utilized:

- Discord (Available at <https://discordapp.com/>)
- Discord Server (Available through Discord)
- Python 3 (Available at <https://www.python.org/downloads/>)
- discord.py (Available at <https://pypi.org/project/discord.py/>)

All off-the-shelf software are available for free.

1.3.5 Anticipated Workplace Environment

The anticipated workplace environment for this application is within a software development team's Discord server. This application can be used from anywhere, as long as the user has access to the respective Discord server.

1.3.6 Schedule Constraints

The project deliverable must be completed by their respective deadline. The remaining deadline include:

- Proof of Concept (February 13, 2020, 1:00 PM)
- Test Plan, Revision 0 (February 28, 2020, 11:30 PM)
- Design & Document, Revision 0 (March 13, 2020, 11:30 PM)
- Demonstration, Revision 0 (March 17, 2020)
- Demonstration, Revision 1 (March 31, 2020)
- Final Documentation, Revision 1 (April 6, 2020, 11:30 PM)

1.3.7 Budget Constraints

This project has no monetary budget. If there are any necessary purchases for development, the cost shall be paid by the project members. All resources to re-create and upgrade the existing project are provided.

1.3.8 Enterprise Constraints

This application will be available for free to any user that has access to a Discord server and a machine with Python 3 (and the dependencies) installed.

1.4 Naming Conventions and Terminology

1.5 Relevant Facts and Assumptions

It is assumed that the user will be deploying the Discord bot on Discord. It is assumed that the user is familiar with the Scrum Agile process framework and the Agile development software design methodology.

2 Functional Requirements

2.1 The Scope of the Work and the Product

2.1.1 The Context of the Work

This product is designed to be used by software development teams using: Discord as their main communication channel, an Agile development software design methodology, and Scrum agile process framework. Additionally, this application can be integrated with Trello, and Google Calendar and Maps.

2.1.2 Work Partitioning

2.1.3 Individual Product Use Cases

2.2 Functional Requirements

[BE1.]The development firm wants to add ScrumBot to its Discord channel[VP1.]

1. (a) Viewpoint:

2. The Business Analyst wants to add a new project
[VP1.]Viewpoint: Development Team
 - (a)
 - i. The system shall update the project list of the development team
 - ii. The system shall notify the development team of the new project
 - iii. The system shall notify the development team of the scheduled first meeting
 - (b) Viewpoint: Business Analyst
 - i. The system shall prompt the Business Analyst for the project name
 - ii. The system shall prompt the Business Analyst for the project details
 - iii. The system shall prompt the Business Analyst for first meeting details
 - iv. The system shall append the project and its details to the project list
 - (c) Viewpoint: Scrum Master
 - i. The system shall update the project list of the Scrum Master
 - ii. The system shall notify the Scrum Master of the new project
 - iii. The system shall notify the Scrum Master of the scheduled first meeting

3 Non-functional Requirements

3.1 Look and Feel Requirements

- The system will output the

3.1.1 Style Requirements

- The system shall use short, clear, and descriptive role names

3.2 Usability and Humanity Requirements

3.2.1 Ease of Use Requirements

- The system shall have intuitive user commands
- The system shall be easy to use for ages 13+

3.2.2 Personalization and Internationalization Requirements

- The system shall be used by English speakers only

3.2.3 Learning Requirements

- The system shall have a help menu to explain commands to the user

3.3 Performance Requirements

3.3.1 Speed and Latency Requirements

- The system shall respond to user commands within 2 seconds.

3.3.2 Precision or Accuracy Requirements

- The system shall have a meeting locations and schedules accuracy greater than 70%
- All meeting times should be accurate to within 30 seconds

3.3.3 Reliability and Availability Requirements

- The system shall load and use the correct data for the team

3.4 Operational and Environmental Requirements

3.4.1 Expected Environment

- The system shall be able to operated and be executed within the Discord application

3.4.2 Requirements for Interfacing with Adjacent Systems

- The system shall connect to Google's API services
- The system shall connect to Discord's API services
- The system shall connect to Trello's API services

3.5 Maintainability and Support Requirements

3.5.1 Maintainability Requirements

- The code shall be documented using comments
- The code shall be documented using Doxygen
- The code documentation shall be easy to understand

3.5.2 Supportability Requirements

- The system shall have a help menu available to users at all times

3.5.3 Longevity Requirements

- The system will be made in modules to increase maintainability and longevity

3.6 Security Requirements

- The connection between the system and the APIs shall use HTTPS for security

3.7 Cultural Requirements

- The system shall use Canadian English spelling

3.8 Legal Requirements

N/A

3.9 Health and Safety Requirements

N/A

4 Project Issues

4.1 Open Issues

N/A

4.2 Off-the-Shelf Solutions

4.2.1 Ready-Made Products

There are open source projects for a Discord Scrum Bot readily available online. Two of which include Scrum Bot by Austen Goddu (<https://github.com/Austen-G/Scrum-Bot>) and scrumbot by Colin Brady (<https://github.com/colin-brady/scrumbot>).

There are also Scrum Bots available for Slack that should be investigated. Two of which include ScrumGenius (<https://scrumgenius.com/>) and Scrum Bot (<https://scrumbot.sifts.io/>). ScrumGenius is a paid service.

4.2.2 Reusable Components

The Python library, discord.py, can be used to streamline communications with the Discord server.

4.2.3 Products That Can Be Copied

The existing that this application is a re-make of, can be legally copied and modified.

4.3 New Problems

4.3.1 Effects on the Current Environment

The application needs to be hosted on a server and unless there is an error or the server gets overloaded, the current environment should not be affected.

4.3.2 Effects on the Installed Systems

The application does not interface/coexist with the old implementation.

4.3.3 Potential User Problems

Potential user problems as an adverse reaction from interacting with the application during extended use are any problems that would be a result of using a computer. This include but not limited to, carpal tunnel syndrome, computer vision syndrome, and musculoskeletal problems.

4.3.4 Limitations in the Anticipated Implementation Environment That May Inhibit the New Product

The server that will host the application will not be powerful enough to handle the amount of network traffic as users are interfacing with it.

4.3.5 Follow-Up Problems

In the future, if one or more of the API methods used become deprecated and removed, the application will cease to function.

4.4 Tasks

4.5 Migration to the New Product

4.6 Risks

There are currently no foreseen risks for this product.

4.7 Costs

There are currently no foreseen costs for this project. All software products used are currently free-to-use.

4.8 User Documentation and Training

4.8.1 User Documentation Requirements

4.8.2 Training Requirements

Basic knowledge in the use of Discord is needed to use this product. Knowledge of the Agile Development Method and the Scrum agile framework is also necessary for the user of this product. Documentation concerning ScrumBot and its commands will be provided to the users.

4.9 Waiting Room

4.10 Ideas for Solutions

5 Appendix

This section has been added to the Volere template. This is where you can place additional information.

5.1 Symbolic Parameters

The definition of the requirements will likely call for `SYMBOLIC_CONSTANTS`. Their values are defined in this section for easy maintenance.
